

With rtWatch our goal is to be proactive in preventing IT failures.

The primary goal of our monitoring, alerting, and trending service is to prevent disruption of your business resulting in loss of revenue. Initially we examine your IT infrastructure to identify potential interruption vulnerabilities. Based on the aforementioned examination we make recommendations to improve your systems' performance. Those improvements ultimately translate to lower costs, higher productivity, and increased revenue.

Our rtWatch includes the following services:

- Monitoring , Alerting, and Trending for Managed Network devices
- Monitoring, Alerting and Trending for Windows based Servers
- Bandwith capacity management
- Server disk space management
- Server Memory/CPU management
- Application and Service Monitoring
- Availability Management
